Subject: ADDITION OF A SECOND
31182-001 ANGLE BRACKET
WITH ATTACHING HARDWARE.

The 31183-001 wing incidence tool provided in the 921 Rigging Kit for adjustment of wing incidence has been modified by the addition of a 31182-001 angle bracket which is attached to the tool at the front spar location.

The inclinometer provided in the 907 Fuselage Equipment Kit may now be set on either the front or the rear angle bracket of the incidence tool for convenience in observing the bubble level. The upper wing incidence is adjusted while working from the front of the aircraft with the inclinometer set on the front angle bracket of the incidence tool. The lower wing incidence is more easily adjusted while working aft of the wing with the inclinometer set on the rear angle bracket of the incidence tool.

An additional 31182-001 bracket and the associated hardware is being sent to all Christen customers to whom the 921 kit has been sent. The next 921 manual revision will include the wing incidence tool modification.
