Subject: REVISED INSPECTION PLATE
FOR AILERON PUSHROD COVER

The 31060-001 inspection plate, which is attached to the aileron pushrod cover, and which is removed to inspect the connection between the aileron pushrods and the control stick torque tube, has been revised to eliminate the two forward facing mounting screws which are inaccessible when the optional 912-T Transponder Kit is installed.

The inspection plate supplied in early 907 Fuselage Equipment Kits can be used with the 912 Navcom Kit for either the Narco or the Edo-Aire radio, but the new type inspection plate is required if the optional 912-T Transponder Kit is added. With the transponder in place, the two forward facing mounting screws for the inspection plate are not accessible.

The new style 31060-001 inspection plate is available from the Christen factory at no charge to Eagle builders who intend to install the optional transponder kit in their aircraft. The installation of the new inspection plate is a part of the 907 Manual Revision 13 which was issued recently.
