Subject: TYPOGRAPHICAL ERRORS IN  
EAGLE II AIRCRAFT INTERIM  
WEIGHT AND BALANCE DATA

This letter is being sent to all Eagle II aircraft builders to whom the 915 Canopy Kit has been delivered and for whom the canopy system was installed by the factory team.

At the time of installation of your canopy kit, you may have been given a copy of Eagle II weight and balance data for use in obtaining the final FAA pre-flight inspection of your aircraft. This data would have been in the form of Xerox copies of Christen Engineering Sketches X-90121 through X-90128. The information on these sketches was taken from the draft of the 924 Flight Kit manual.

A builder has observed that there are several typographical errors in the data presented. For example, 15 gallons of fuel is listed as weighing 150 pounds rather than 90 pounds which is correct. Also, the maximum and minimum flight weights and CG limits are listed for Standard Category use, but they are only partially listed for Acrobatic Category use, since the aft limit line is omitted.

Corrected and expanded copies of the interim data are being prepared now and will be sent to you within the next few days.
