Subject: PRODUCT MANUALS FOR
EAGLE II AIRCRAFT
915 CANOPY KITS

This letter is being sent to all Eagle II aircraft builders to whom the 915 Canopy Kit has been delivered for field installation by the factory team, and who have not yet received the product manual for the 915 Kit.

After many months of delay imposed by our decision to rewrite and expand the canopy kit product manual, regular production deliveries of kits began on February 24 at a rate of 15 kits per week.

A copy of the product manual for the 915 Kit is being sent to you in a separate package via United Parcel Service. As with other product manuals, you will receive any revisions to this manual which may be issued in the future.

We recommend that you read through the manual when you receive it to be sure that you are familiar with all features of canopy system construction, operation, and maintenance. You will discover much useful information which may not have been conveyed to you by the factory team who installed your system.

We will appreciate receiving from you any suggestions you may have for improvement of either the canopy system or its associated product manual.

ENCLOSURES:

NONE
