Subject: TAPERED WASHERS FOR
MOUNTING INTERPLANE
STRUTS ON EAGLE II
AIRCRAFT

A tapered washer (part 30352-001) has been developed to improve the attachment of the interplane struts to the wing spars. These washers are installed on the eight bolts attaching the I-struts to the wings, and they fill the gap produced by the angular relationship between the strut and the wing spars.

The 921 Rigging Kit manual steps B-11 through B-14, and B-24 have been revised to describe the installation of these washers.

Builders whose aircraft are completed may retrofit the tapered washers, if desired; however, it will be necessary to loosen the landing and flying wires to gain sufficient clearance to install the tapered washers. It will also be necessary to re-rig the wings following installation. Refer to the 921 manual, steps B-11 through B-14, B-16, B-20 through B-23, and B-25 for a review of the necessary rigging procedures.
