Subject: CHANGE OF INTERPLANE
STRUT MOUNTING HARDWARE

It has been observed that the 50069-007 self-locking nuts used to secure the bolts which attach the interplane struts cannot be tightened easily with a standard hex socket because of the close proximity of the edges of the opening in the strut to the sides of the nut. Normally a thin wall socket is required.

Christen 50815-006 reduced hex self-locking nuts have been added to the 921 kit in place of the 50069-007 nuts previously used to attach the interplane struts. The new reduced hex nuts are tightened with a 5/16 inch socket instead of the 7/16 inch socket required for the original nuts.

Builders may replace the original nuts with the new reduced hex nuts for added convenience by ordering as follows:

8 each 50815-006 Reduced hex nut
