Subject: INCORRECT PART NUMBER
MARKING OF CONTROL STICKS

There is a possibility that the 30729-501 front control stick and the 30729-502 rear control stick supplied in your 907 kit were incorrectly marked with reversed part numbers.

If the control stick locations are reversed the dimension called for in paragraph 4 of step B-19 will be 34 to 35 inches instead of the required 32 inches approximately.

The rear control stick may be identified by its handgrip section which is angled slightly forward at the top. The front control stick handgrip section is angled slightly aft at the top.

If you do not have the 32 inch approximate dimension between the control stick grips after attaching the control stick to the torque tube assembly, check the control sticks for possible reversed marking. If the markings are reversed, reverse the stick locations to produce the required 32 inch dimension.
