Subject: ADDITION OF CANOPY FRAME
STIFFENER AND NEW OIL
COOLER MOUNTING PARTS TO
EAGLE II 920 COWLING KIT

Stiffeners have been added to the 920 Cowling Kit for attachment to the cowling panel gill frames to prevent cracking of the outboard webs of the frames.

New spacer tubes and tube retainers have also been added to the 920 Kit to simplify oil cooler installation and removal for servicing.

Attached are copies of revised pages of the 920 Kit product manual which illustrate the installation of these new parts.

The gill frame stiffeners and the oil cooler spacer parts will be standard parts of all 920 Kits delivered in the future, and these parts can be installed easily on existing gill frames and oil coolers with only hand tools.

We recommend that all Eagle II aircraft builders and owners make these installations.

Following is a list of all parts required to make the installations. All parts are available immediately from factory stock:

PART NO.	DESCRIPTION	UNIT	QTY REQD
30499-002	RETAINER	EA	8
30504-064	TUBE	EA	4
30932-001	STIFFENER	EA	2
50122-001	RIVET	EA	16
50276-002	RIVET	EA	16
--	FIRST CLASS MAIL	--	--
