Subject: DELIVERY OF 911-FD FUEL
DISPLAY KIT FOR CHRISTEN
EAGLE II AIRCRAFT

The 911-FD Fuel Display Kit was announced in October of last year and deliveries were originally scheduled to begin before the end of November. At the time of the announcement, several significant improvements in the fuel display indicator were being evaluated. Among these were the use of permanent semiconductor memory to eliminate the requirement for a battery to maintain stored data, a standard 2-1/4" dia instrument mounting, and an improved switch for system function selection.

Following evaluation of these improvements it was decided that they should be made a standard part of the fuel display system, and we elected to delay initial delivery of the system long enough to make the required inventory and production changes. We originally thought that this process would take only a few weeks, but problems with delivery of vendor supplied parts and the time necessary to change engineering documentation and product manual instructions and illustrations have prolonged the delay significantly.

Inventory of all parts is now on hand and product manual documentation will be complete within the next two weeks. We now expect to deliver all existing orders for the 911-FD Kit by April 15.

We sincerely apologize for the inordinate delay in the delivery of the 911-FD Kit, and we assure you that we will make every effort to avoid any additional delays in the future. We are confident that the quality and performance of the fuel display system will be substantial compensation to you for any inconvenience the delay has caused you. Thank you for your patience and understanding in this matter.

ENCLOSURES:
